Software System Design and Implementation

Induction, Data Types and Type Classes Practice

Christine Rizkallah
CSE, UNSW (and Data61)
Term 2 2019

Recap: Induction

Suppose we want to prove that a property $P(n)$ holds for **all** natural numbers n .

Remember that the set of natural numbers \mathbb{N} can be defined as follows:

Definition of Natural Numbers

- 1 0 is a natural number.
- 2 For any natural number n , $n + 1$ is also a natural number.

Therefore, to show $P(n)$ for all n , it suffices to show:

- 1 $P(0)$ (the **base case**), and
- 2 assuming $P(k)$ (the **inductive hypothesis**),
 $\Rightarrow P(k + 1)$ (the **inductive case**).

Recap: Induction on Lists

Haskell lists can be defined similarly to natural numbers.

Definition of Haskell Lists

- 1 `[]` is a list.
- 2 For any list `xs`, `x:xs` is also a list (for any item `x`).

This means, if we want to prove that a property $P(l_s)$ holds for all lists `ls`, it suffices to show:

- 1 $P([])$ (the base case)
- 2 $P(x:xs)$ for all items `x`, assuming the inductive hypothesis $P(xs)$.

Recap: Type Classes

Semigroups

A *semigroup* is a pair of a set S and an operation $\bullet : S \rightarrow S \rightarrow S$ where the operation \bullet is *associative*.

Associativity is defined as, for all a, b, c :

$$(a \bullet (b \bullet c)) = ((a \bullet b) \bullet c)$$

Recap: Type Classes

Monoids

A *monoid* is a semigroup (S, \bullet) equipped with a special *identity element* $z : S$ such that $x \bullet z = x$ and $z \bullet y = y$ for all x, y .

Example

```
instance Monoid [a] where
  mempty = []
  mappend = (++)
```

List Monoid Example

$(++) :: [a] \rightarrow [a] \rightarrow [a]$

$(++) [] \quad ys = ys \quad \text{-- } 1$

$(++) (x:xs) \quad ys = x : xs ++ ys \quad \text{-- } 2$

Example (Monoid)

Prove for all xs, ys, zs :

$((xs ++ ys) ++ zs) = (xs ++ (ys ++ zs))$

Additionally Prove

① for all xs :

$[] ++ xs == xs$

② for all xs :

$xs ++ [] == xs$

(done on iPad)

List Reverse Example

```

(+++) :: [a] -> [a] -> [a]
(+++) []      ys = ys                -- 1
(+++) (x:xs)  ys = x : xs ++ ys    -- 2

reverse :: [a] -> [a]
reverse []      = []                -- A
reverse (x:xs)  = reverse xs ++ [x] -- B

```

Example

Prove for all `ls`:

`reverse (reverse ls) == ls`

(done on iPad) **stuck!**

List Reverse Example

```
(++) :: [a] -> [a] -> [a]
```

```
(++) []      ys = ys                -- 1
```

```
(++) (x:xs) ys = x : xs ++ ys      -- 2
```

```
reverse :: [a] -> [a]
```

```
reverse []      = []                -- A
```

```
reverse (x:xs) = reverse xs ++ [x]  -- B
```

Example

To Prove for all `ls`:

$$\text{reverse} (\text{reverse } ls) == ls$$

First Prove for all `ys`:

$$\text{reverse} (ys ++ [x]) = x : \text{reverse } ys$$

(done on iPad)

Recap: Product Type Examples

```
data Point = Point Float Float
    deriving (Show, Eq)
```

```
data Vector = Vector Float Float
    deriving (Show, Eq)
```

```
movePoint :: Point -> Vector -> Point
movePoint (Point x y) (Vector dx dy)
    = Point (x + dx) (y + dy)
```

Recap: Record Example

```
data Colour = Colour { redC      :: Int
                      , greenC   :: Int
                      , blueC    :: Int
                      , opacityC :: Int
                      } deriving (Show, Eq)
```

Recap: Algebraic Data Types Example

Just as the `Point` constructor took two `Float` arguments, constructors for sum types can take parameters too, allowing us to model different kinds of shape:

```
data PictureObject
  = Path      [Point]      Colour LineStyle
  | Circle   Point Float   Colour LineStyle FillStyle
  | Polygon  [Point]       Colour LineStyle FillStyle
  | Ellipse  Point Float   Float Float
                      Colour LineStyle FillStyle
deriving (Show, Eq)

type Picture = [PictureObject]
```

Live Coding: More Cool Graphics

Example (Fractal Trees)

Homework

- 1 Do the first programming exercise, and ask us on Piazza if you get stuck. It is due in 6 days.
- 2 Last week's quiz is due this Friday. Make sure you submit your answers.
- 3 This week's quiz is also up, due next Friday (9 days away).
